## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-15 and 33-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Palcic et al.' 190 (US Patent 5,827,190).

Palcic et al.' 190 teach normalization of at least one fluorescence image by using a remittance image or as otherwise stated, reflected reference light image, in order to correct for many factors including light intensity allowing for differentiation of normal and diseased tissue (see col. 2, line 20-col. 3, line 37).

While Palcic et al.' 190 do not specifically address specified values, it would have been obvious to one skilled in the art at the time that the invention was made that the normalization process necessarily incorporates specified values or thresholds in order to differentiate normal from abnormal tissue as this is well within the knowledge of skilled artisans.

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Zeng et al.' 424 (US Patent No. 6,826,424) teach fluorescence and reflectance imaging.
